

C.H.J. Incorporated

Arrowhead Regional Medical Center

Client: County of San Bernardino Architecture and Engineering

CHJ provided the Geotechnical Investigation, grading observation, compaction testing, welding, fireproofing and asphalt inspection, concrete inspection and testing, and various other materials testing services for Arrowhead Regional Medical Center located in Colton, California. This replacement project was both innovative and extremely necessary due to the close proximity to the San Jacinto and San Andreas faults. Earthquake retrofitting was designed and implemented to help this facility maintain normal operation after a major quake. ○
