

C.H.J. Incorporated

Loma Linda University Medical Center, Daniells Hall

*Client: Loma Linda University Medical
Center*

CHJ performed a geotechnical investigation, grading observation, compaction testing, and Inspection Services for the Daniells Hall Student Housing located on the Loma Linda University campus. Due to the restricted space for the proposed student housing, large retaining walls were necessary for development of the structure. CHJ provided the needed seismic and static design parameters for the design of the retaining walls and performed observation and inspection of the wall construction. Again due to the limited space for construction CHJ provided careful observation of the site grading to help ensure that all areas were properly graded and all required removals were conducted.○
