## **Wilson Creek Levee**

---

*Client: Communities Southwest*

CHJ performed the geotechnical feasibility study for the Wilson Creek levee project. In addition, CHJ was also responsible for all of the compaction testing, materials inspection and testing and the associated laboratory work. This project consisted of the evaluation of the use of existing materials with soil cement to reconstruct the existing earthen levee on the west side of the channel. The proposed levee was approximately 1-1/2 miles in length. ○
